³Institute of Ocean Sciences

Diapycnal mixing in the Archipelago

Rationale
Approach
Processes
Simulated flow
Inverse method
Budget
Tides?
Conclusions

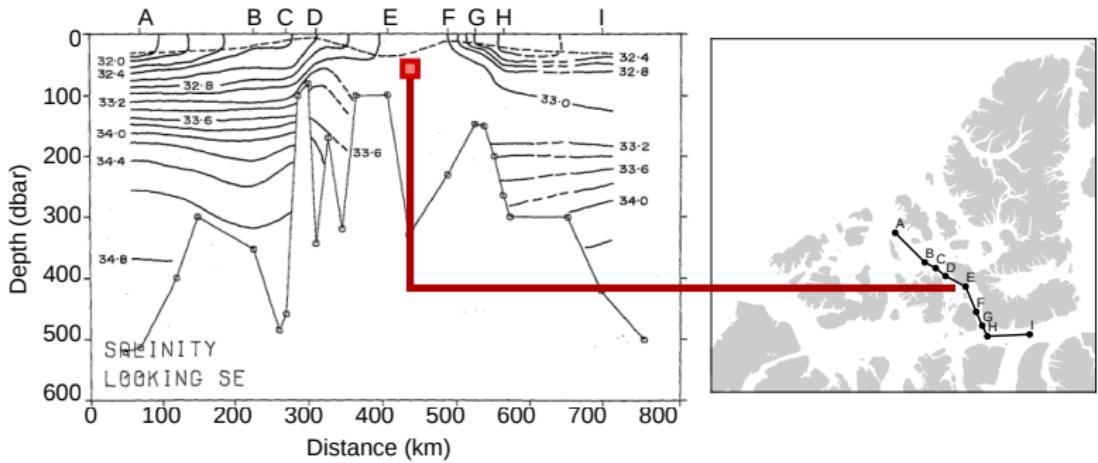

Large-scale flow estimates disagree

Jahn et al. (2012)

Past observations indicate strong mixing

Rationale
Approach
Processes
Simulated flow
Inverse method
Budget
Tides?
Conclusions

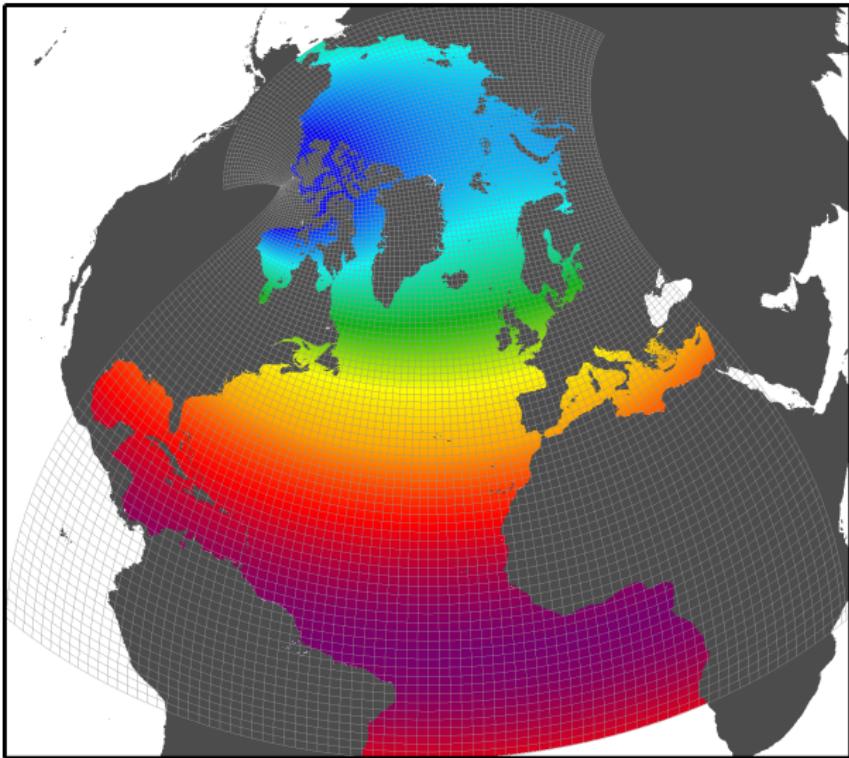

de Lange Boom et al. (1987)

Diapycnal mixing in the Archipelago

Rationale
Approach
Processes
Simulated flow
Inverse method
Budget
Tides?
Conclusions

Estimating mixing from a model

Several processes control throughflow

Rationale

Approach

Processes

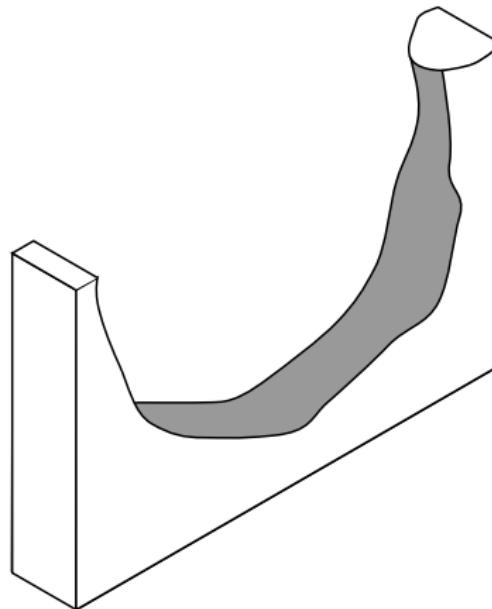

Simulated flow

Inverse method

Budget

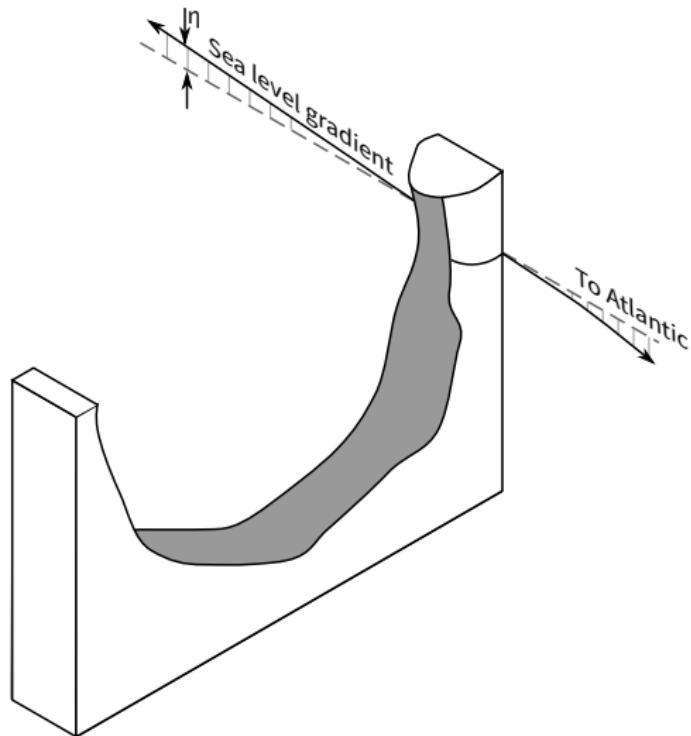

Tides?

Conclusions

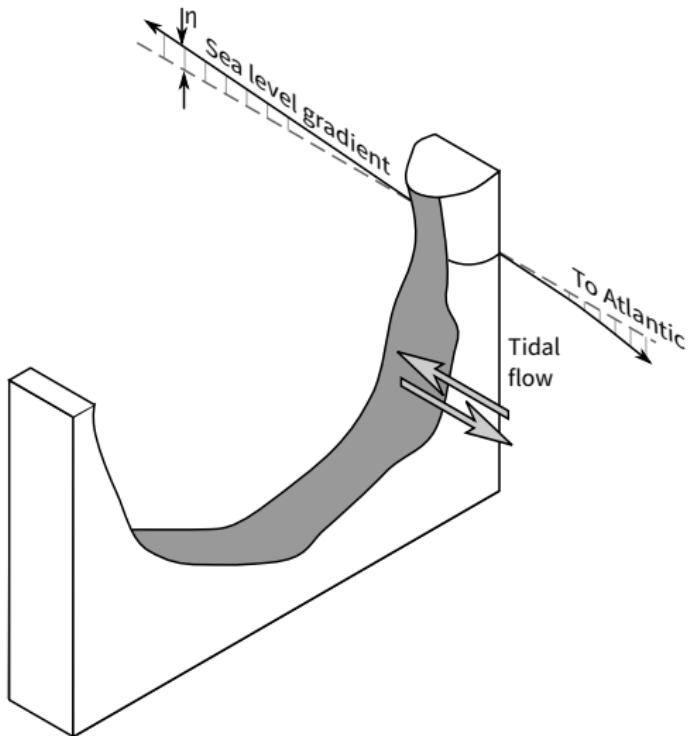

Several processes control throughflow

Budget

Tides?

Conclusions

What about tides?

Rationale
Approach
Processes
Simulated flow
Inverse method
Budget
Tides?
Conclusions

- Use a large-scale simulation to quantify
 - Mixing metrics
 - Terms in the mass budget
- Mixing is localised
- Central sills have dual role

Rationale
Approach
Processes
Simulated flow
Inverse method
Budget
Tides?
Conclusions

- Use a large-scale simulation to quantify
 - Mixing metrics
